

Report title	GHG Emission Report, v1.1
Indicator	1.21.4
Instructions	<p><i>This template is intended for reporting greenhouse gas emissions results to ASC. The Feed Standard does not prescribe a specific standard or set of methods for generating GHG values. However, suppliers should be aware that the development of the Farm Standard requirements may necessitate the application of specific methods for feed emissions in the future.</i></p> <p><i>Emissions can be reported in either or both columns using a biophysical or economic allocation approach. Emissions results must be provided according to scope (1-3) as well as by input/activity, being general feed ingredient categories and additional transport and milling emissions that aren't otherwise captured within ingredients. 'Transport and milling' emissions should be at least equal to the sum of scope 1 and scope 2 emissions. If possible, emissions should also be broken down by category (fossil, biogenic, or land use change), facilitated by certain databases and assessment methods. Any uncategorized emissions should be reported as 'Unspecified emissions' (If feed suppliers are unable to determine emissions by category, the total of all emissions can be reported as unspecified).</i></p> <p><i>This template is also expected to reflect the resolution of data that feed suppliers will need to provide to farms to satisfy feed-related emissions modeling for the Farm Standard. Feed suppliers should be ready to adjust the composition of ingredients used in calculations to reflect typical compositions of feeds relevant to each producer, whether that is on a producer-level or a general species-level (e.g. average ASC-compliant salmon feed composition), so that relevant emissions estimates are available to aquaculture producers for their own calculations.</i></p> <p>Only enter data in blue cells.</p>
	

Table 1. Production year																																					
Year of production (yyyy)	2025																																				
Table 2. GHG emissions by scope	GHG emissions per tonne of ASC compliant feed (kg CO₂-eq/t)

Table 3. GHG emissions by category	GHG emissions per tonne of ASC compliant feed (kg CO₂-eq/t)																																				
Emissions category	<table border="1"> <thead> <tr> <th></th> <th>Biophysical (mass) model</th> <th>Economic model</th> </tr> </thead> <tbody> <tr> <td>Fossil emissions</td> <td>0</td> <td></td> </tr> <tr> <td>Biogenic emissions</td> <td>0</td> <td></td> </tr> <tr> <td>Land use change emissions</td> <td>0</td> <td></td> </tr> <tr> <td>Unspecified emissions</td> <td></td> <td></td> </tr> <tr> <td>Total</td> <td>0</td> <td>0</td> </tr> </tbody> </table>		Biophysical (mass) model	Economic model	Fossil emissions	0		Biogenic emissions	0		Land use change emissions	0		Unspecified emissions			Total	0	0																		
	Biophysical (mass) model	Economic model																																			
Fossil emissions	0																																				
Biogenic emissions	0																																				
Land use change emissions	0																																				
Unspecified emissions																																					
Total	0	0																																			
Table 4. GHG emission by Input / Activity	GHG emissions per tonne of ASC compliant feed (kg CO₂-eq/t)																																				
Input / Activity	<table border="1"> <thead> <tr> <th></th> <th>Quantity (kg/t)</th> <th>Biophysical (mass) model</th> <th>Economic model</th> </tr> </thead> <tbody> <tr> <td>Soy crop inputs</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Other crop inputs</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Reduction fishery inputs</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Fishery by-product inputs</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Poultry / livestock inputs</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Other feed inputs</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Transport and milling</td> <td></td> <td></td> <td></td> </tr> <tr> <td>Total</td> <td>0</td> <td>0</td> <td>0</td> </tr> </tbody> </table>		Quantity (kg/t)	Biophysical (mass) model	Economic model	Soy crop inputs				Other crop inputs				Reduction fishery inputs				Fishery by-product inputs				Poultry / livestock inputs				Other feed inputs				Transport and milling				Total	0	0	0
	Quantity (kg/t)	Biophysical (mass) model	Economic model																																		
Soy crop inputs																																					
Other crop inputs																																					
Reduction fishery inputs																																					
Fishery by-product inputs																																					
Poultry / livestock inputs																																					
Other feed inputs																																					
Transport and milling																																					
Total	0	0	0																																		
Notes																																					
All emissions values must be reported in units of kg CO ₂ -equivalent per tonne of ASC compliant feed.																																					
Emissions totals for each section should be equivalent.																																					
Total feed input quantity (kg/t) must equal 1000. Use 'Other feed inputs' to make up any difference from 1000 kg. 'Other feed inputs' should also include vitamins, amino acids, and other microingredients.																																					
Transport-related emissions may be difficult to separate from ingredient production and processing emissions, depending on the data source used. Do not include any transport emissions in 'Transport and milling' that are already counted in the emissions of one of the ingredient groups.
